The temperature-dependent near-infrared absorption spectrum of hexagonal H₂O ice

W. M. Grundy¹ and B. Schmitt
 CNRS/Laboratoire de Chimie et de Physique de l'Environnement, Grenoble, France

Abstract. Transmission spectra were measured between 1.0 and 2.7 µm for microcrystalline samples of hexagonal water ice at temperatures between 20 and 270 K. Samples were crystallized from liquid water within closed cells with thicknesses ranging from 100 µm to 1.0 cm. The absorption spectrum of ice changes with temperature in several ways. With higher temperature, the shapes of absorption bands become more smoothed, the strengths of some absorption bands decrease, the absorption in continuum wavelengths increases, and the band centers of some absorption bands shift to shorter wavelengths. In this paper we present the near infrared reflectance spectra of low-temperature ice samples, with an illustration of some absorption bands shift to shorter wavelengths. These data should prove extremely valuable for analysis of near infrared reflectance spectra of low-temperature icy surfaces, such as those of outer solar system satellites, Kuiper Belt objects, Pluto and Charon, comets nuclei, the polar caps of Mars, and interplanetary dust and ice particles in the atmosphere of planets.

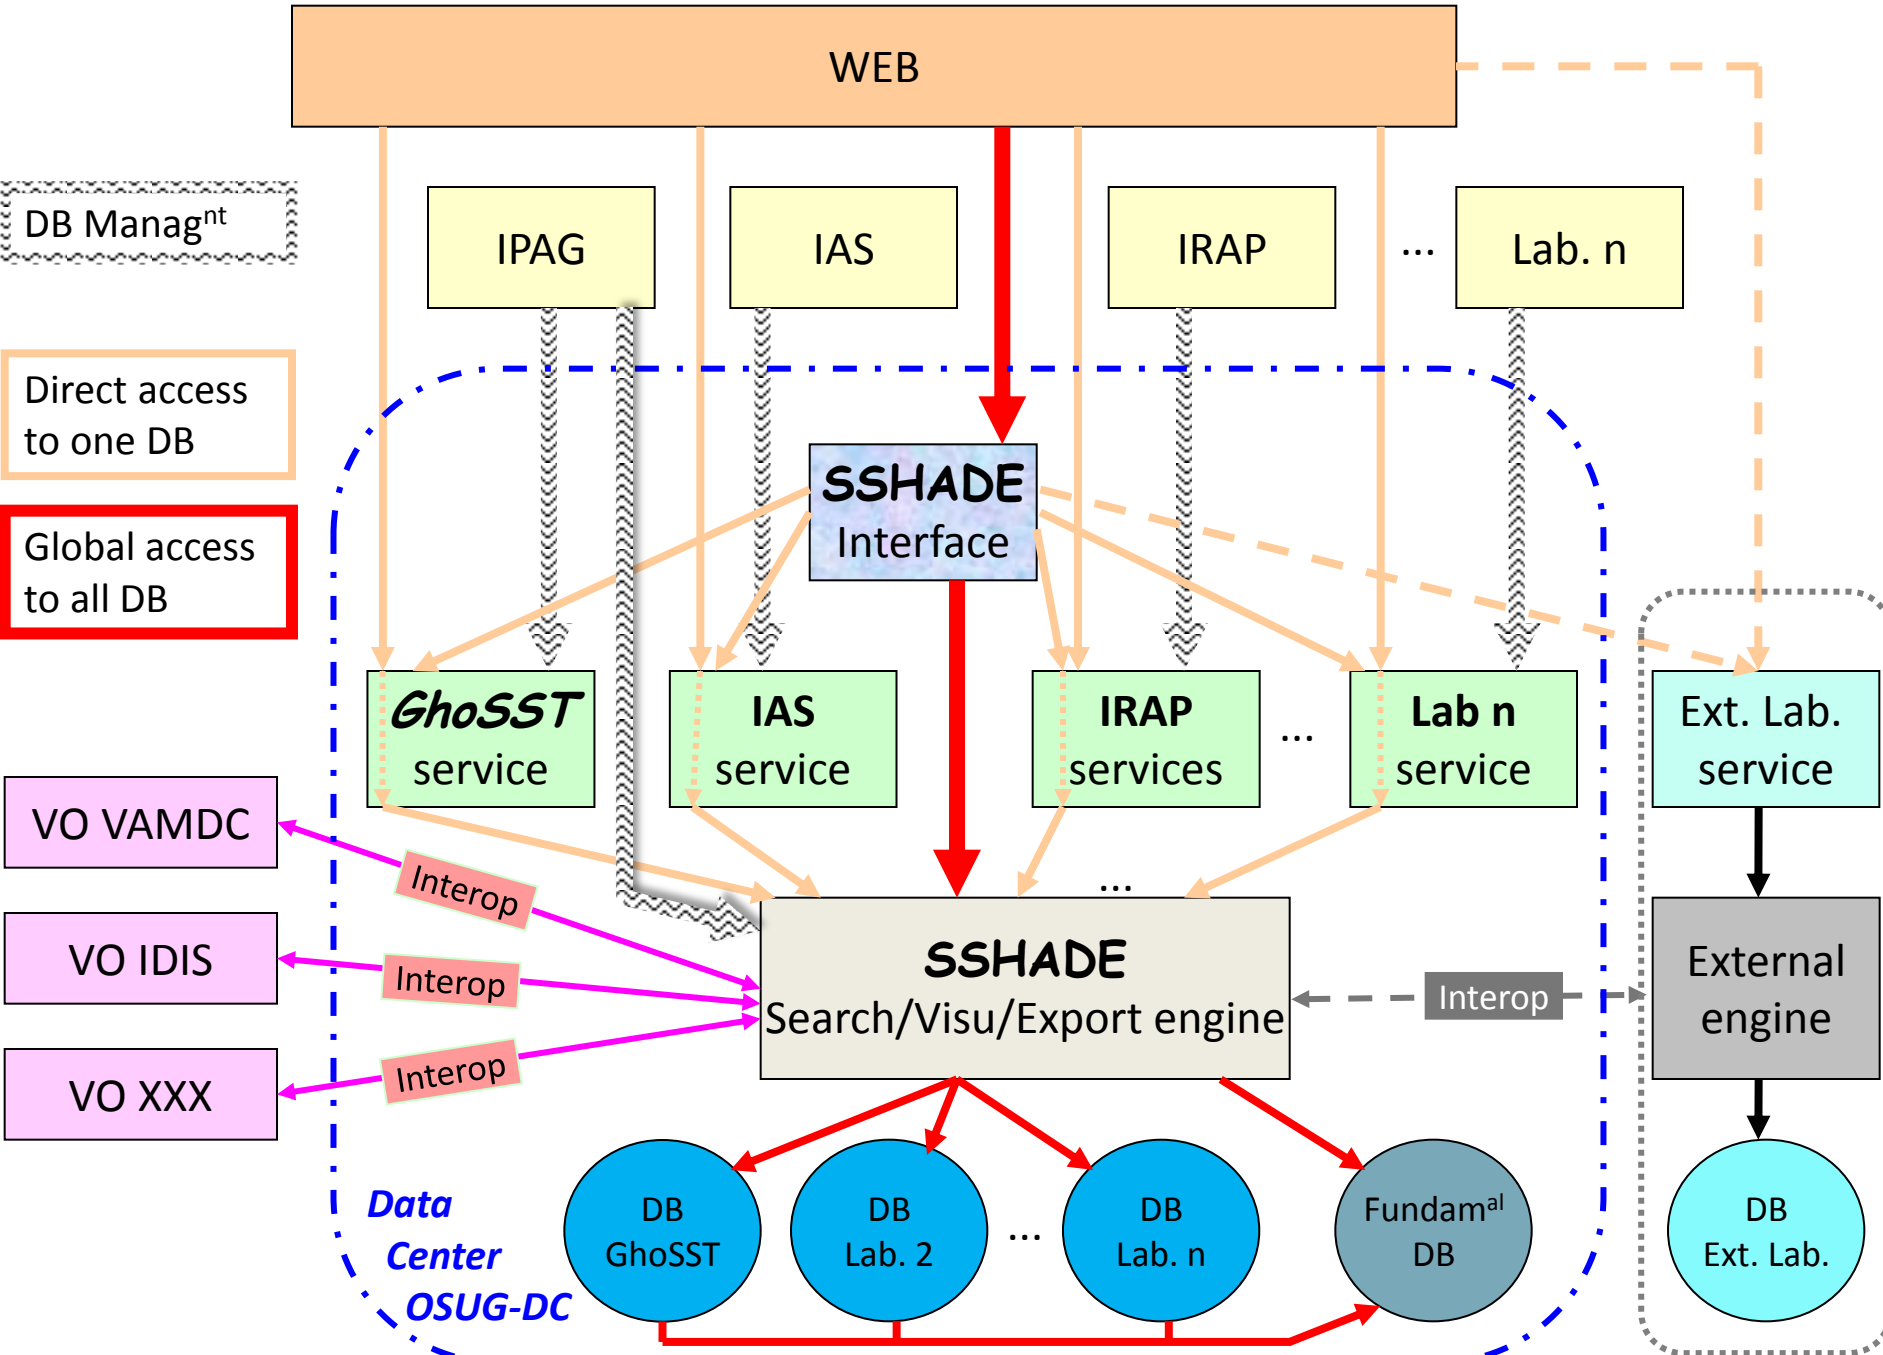

Hosting Solid Spectroscopy data of European Data Providers: *SSHADÉ*

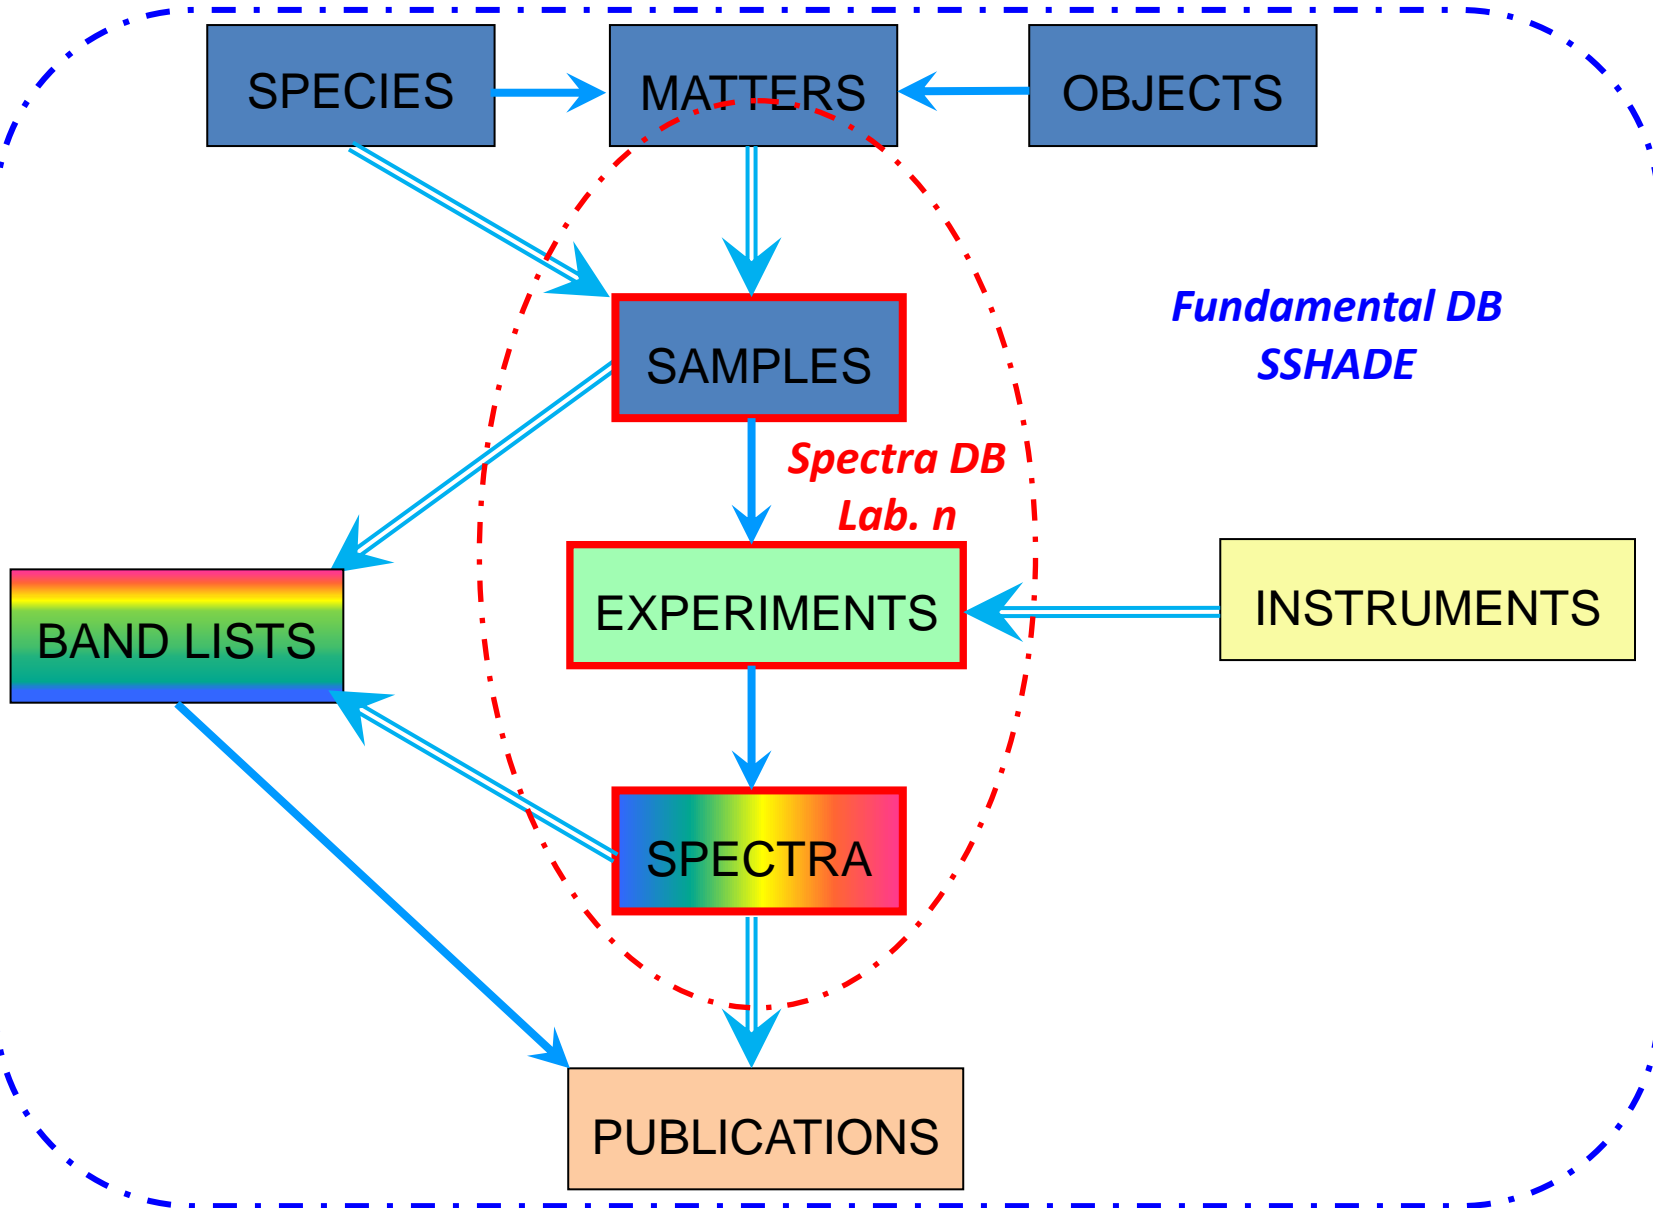

SSHADÉ :

“Solid Spectroscopy Hosting Architecture of Databases and Expertise”

- Based on the ***GhoSST*** database developments (Europlanet + VAMDC)
=> <http://ghosst.osug.fr>
- Made of:
 - ✓ A ‘solid spectroscopy’ interface
 - ✓ A Search/Visualization/Export engine
 - ✓ A set of databases: one per laboratory (GhoSST is one of them)
 - ✓ A common fundamental database
- Also direct link to each individual DB web page (powered by SSHADÉ)
- All hosted at OSUG data center (OSU Grenoble - UJF)
- SSHADÉ will be a client of others VO (Europlanet-VO, VAMDC, ...)

SSHADE: new SSDM Structure

SSHADE: Development at IPAG

- **To be done:**
 - **Reorganization of databases**
 - common fundamental part (SSHADE) + specific parts (LABOS)
 - rewriting data queries (multi DB)
 - SSHADE web page + links
 - **Creation of one database per Lab**
 - database + local Web page + links
 - search and info pages adaptative to DB content
 - **Tools for easier data import**
 - data entry interfaces (responsive) to create xml import files
 - validation tools
 - **VO interoperability**
 - EPN-TAP + VAMDC-TAP layers for VO access
 - VOTables with main DB content
 - **Formation of data producers**
 - preparation and validation of data
 - feeding and managing of their own database

SSHADÉ: work at each laboratory / group

- **Data producers**
 - record spectral data
 - analysis of data
- **Data base manager**
 - prepare and test import files (all types)
 - import data (sample, spectra, matters) + corrections
 - report bugs, data errors and improvements
- **Scientific manager**
 - validation of data
 - animation of his data base

The SSHADE-EU Labs: 15 (8 french)

French

- IPAG / Planéto (Bernard Schmitt, Lydie Bonal, Damien Albert)
- IAS (Emmanuel Dartois, Donia Baklouti)
- IRAP / GPPS (Patrick Pinet, Serge Chevrel)
- IRAP / MICMAC (Karine Demyk)
- LPGN (Yann Morizet, Manuel Giraud)
- LISA / Univ. Paris-EST (Nicolas Fray)
- PIIM (Patrice Theulé)
- LATMOS / IMPEC (Nathalie Carrasco)
- LGL / ENS-Lyon (Isabelle Daniel, Bruno Reynard)

Europeans

- Open University - UK (Nigel Mason)
- Catania Astrophysical Observatory, INAF - It (G. Leto, M. Munari)
- IAPS – Rome (*Dip. di Scienze Applicate, Univ. di Napoli*) - It (A. Rotundi)
- Space and Planetary Science Division, Univ. of Bern - CH (A. Pommerol)
- AIU Observatory, Jena D. (H. Mutschke) [DOCCD 'database']
- Centro de Astrobiología, INTA-CSIC – E (G. Muñoz Caro)
- Instituto de Estructura de la Materia, Madrid – E (V. Timón)
- ...

Data of SSHADE

- **Spectral ranges:**
 - from VUV to sub-mm
- **Solids:**
 - Ices (low to high pressure, low to room temperature, mixtures, matrix isolated, ...)
 - clathrates hydrates, hydrates
 - minerals (natural and synthesized), rocks
 - organic matter (natural and synthesized), polymers, VUV
 - Extraterrestrial matter: meteorites, IDPs, ...
 - also liquids (organics, ...)
- **Data types:**
 - **Spectra**
 - infrared transmission spectra, absorption coefficients, optical constants
 - Raman spectra et micro-spectroscopy
 - reflectance spectra of surfaces, spectro-photometric functions
 - multispectral and multi-angular Imagery of surfaces
 - **Bandlist**
 - position, width, intensity, attribution ... for molecular solids

SSHADÉ Project

- **Done:**

- 2012: proposition of SSHADÉ to INSU/CNRS w. 5 French laboratories
- 2013: GhoSST get label from INSU/CNRS SO5
Recommendation from INSU/CNRS to develop SSHADÉ
- 23/10/2013: 1st meeting of SSHADÉ-France (IPAG, Grenoble)

- **Project:**

- Feb. 2014 : **first SSHADÉ-Europemeeting**
- 2014: start 2-3 new DataBases (in pre-SSHADÉ structure)
- mid-2014: start preliminary study of SSHADÉ infrastructure
- sept. 2014 *Horizon 2020: EPN(VO) proposal*

- 2016/17: **develop SSHADÉ infrastructure**
(if Horizon 2020 funding)
- 2016/17: **open SSHADÉ DataBases to ‘data producers’**
